

Panpan Hou, Ph.D.

Assistant Professor
Dr Neher's Biophysics Laboratory for
Innovative Drug Discovery,
State Key Laboratory of Quality Research in
Chinese Medicine,
Macau University of Science and Technology,
Avenida Wai Long, Taipa, Macau, China
pphou@must.edu.mo

Education, Training, and Position:

- 2005.09-2009.06 B.S. (Biomedical Engineering),
Huazhong University of Science and Technology, Wuhan, China.
- 2009.06-2014.06 PhD. (Biophysics),
Huazhong University of Science and Technology, Wuhan, China.
- 2014.08-2020.12 Postdoc (Biomedical Engineering),
Washington University in St. Louis, US
- 2021.01-present Assistant Professor,
Macau University of Science and Technology, Macao, China

Contribution to Science

1. VSD-pore coupling mechanism of ion channel voltage-dependent activation.

Among the three major molecular steps in voltage-dependent activation of an ion channel (VSD activation, VSD-pore coupling, and pore opening), the VSD-pore coupling is much less understood than the other two, due to the lack of powerful tools. Using voltage clamp fluorometry, pharmacology, and kinetic modeling, I systematically studied the VSD-pore coupling mechanism of the Kv7.1 (KCNQ1) potassium channel, and proposed a “Hand-and-elbow” mechanism that is well conserved among both voltage- and ligand-gated ion channels. (*Hou, et al. Nature Communications. 2020; Hou, et al. eLife. 2019; Hou, et al. Nature Communications. 2017; Taylor#, Kang#, Hou#, et al. eLife. 2020*)

2. Physiology and drug screening of ion channels. Ion channels can be modulated by various molecules and messengers (Ca²⁺, cAMP, PIP₂, exogenous compounds, etc.) as well as tissue-specific auxiliary subunits. All these modulations together shape and largely diversify the ion channel functions, meanwhile also provide possibilities to develop new drugs for treating major human disease. Using electrophysiological tools with clinical data analysis, I elucidated the cAMP/PKA-dependent phosphorylation of cardiac KCNQ1+KCNE1 (IKs) channels; Using Ca²⁺ uncaging technique, I measured the Ca²⁺ binding rate of BK channels; and we also identified new compounds that can effectively modulate ion channels (*Zhong, Yan et al. Circ Res. 2024; Yan et al. Pharmacol Res. 2023; Ma, Zhong et al. PNAS. 2022; Hou et al., Scientific Reports. 2013, 2016; Liu*, Hou*, Guo* et al. J. Biol. Chem. 2014*)
